

The background is a dark blue field filled with a complex network of thin, light blue lines connecting small, glowing nodes. Some nodes are a pale pinkish-red, while others are a soft blue. The lines and nodes create a sense of depth and connectivity, resembling a molecular structure or a digital network.

# Introduction

Digital technologies are advancing day by day, enhancing our quality of life at the same time. As information exchange processes accelerate, the volumes of transmitted data increase. The advancement of technology allows us to communicate, exchange information, make purchases, trade between countries and continents without having to leave our home.

These changes can not be ignored by the financial sector, of which the main element is money. Historically, this important element of payment had many changes. At first, it was the exchange of natural products, later - coins, then - paper money. Now it's electronic or digital money.

In 2009, the first crypto currency appeared, Bitcoin. It is a digital currency which is encoded cryptographically; its cost depends entirely on the supply and demand of the market. Cryptocurrency allows transactions to be conducted between users without intermediaries (banks, government, etc.). After the successful appearance of Bitcoin, many other crypto-currencies appeared one after another. Eg: Ethereum, Lisk, EOS, Waves, Civic, Ox, Ripple. Cryptocurrency wallets are used to store these funds. Eg: Airbitz, Armory, Bitgo, Blockchain, Coinbase, Greenaddress, Ledger, Jaxx, Mycelium, Samourai, Xapo and others. The exact number of active users of cryptocurrency cannot be determined. However, through obtaining statistical data through surveys and analysis conducted by several companies. The results showed that in 2013, the number of crypto wallets amounted 8.2 million, and in 2016 - 35 million. Thus, showing that cryptocurrency has consolidated its place among money resources and has a tendency to develop even further.

# Alttext Consortium

ALTTEX IS AN INNOVATIVE SYSTEM WHICH CONSISTS OF A DECENTRALIZED CRYPTO EXCHANGE, CRYPTO MESSENGER, AND CRYPTO SAFE. OUR SYSTEM **ALLOWS PEOPLE TO BUY CRYPTO-CURRENCIES FROM ANY PLACE IN THE WORLD WITH ANY BANK CARD.**

ALTTEX IS A UNIQUE PLATFORM FOR MOBILE DEVICES, WHICH COMBINES ALL THE ADVANCED TECHNOLOGIES OF BLOCKCHAIN. HERE, EACH USER CAN TRADE COMFORTABLY AND SAFELY, HAVE PURCHASES, MAKE TRANSFERS OF VARIOUS COINS. ALSO, THE CRYPTO MESSENGER HAS THE POSSIBILITY OF TRANSFERRING VARIOUS DATA FOR PERSONAL AND COMMERCIAL PURPOSES, EXCHANGE VOICE MESSAGES, CREATE SECURE CHAT ROOMS, USE A CUSTOMIZABLE STORE, IN WHICH EVERYONE CAN SELL AND BUY GOODS WITH CRYPTOCURRENCIES, MAKE OUTGOING CALLS TO ANY PHONE NUMBERS AROUND THE

**WORLD MINIMUM COST. SMART SAFE GIVES EACH USER AN OPPORTUNITY TO STORE THEIR CRYPTOCURRENCIES SAFELY, TO RECEIVE PUSH NOTIFICATIONS TO UPDATE THE CURRENT BALANCE, CHANGES IN THE RATE AND NEWS EVERY DAY.**

This platform is based on the following principles: security, convenience and comprehensible interface, designed specifically for mobile devices, advanced technologies and a strong team.

This document includes the main dates on development of the Alttex platform and its advantages, functions, possibilities, the team behind the project and its mission and goals.

# Our Mission and Goals

**OUR MISSION IS TO PERFECT WHAT  
WAS CONSIDERED GOOD.**

Our team aimed to create a universal integrated platform with a high degree of reliability, satisfying the needs of cryptocurrency users as much as possible.

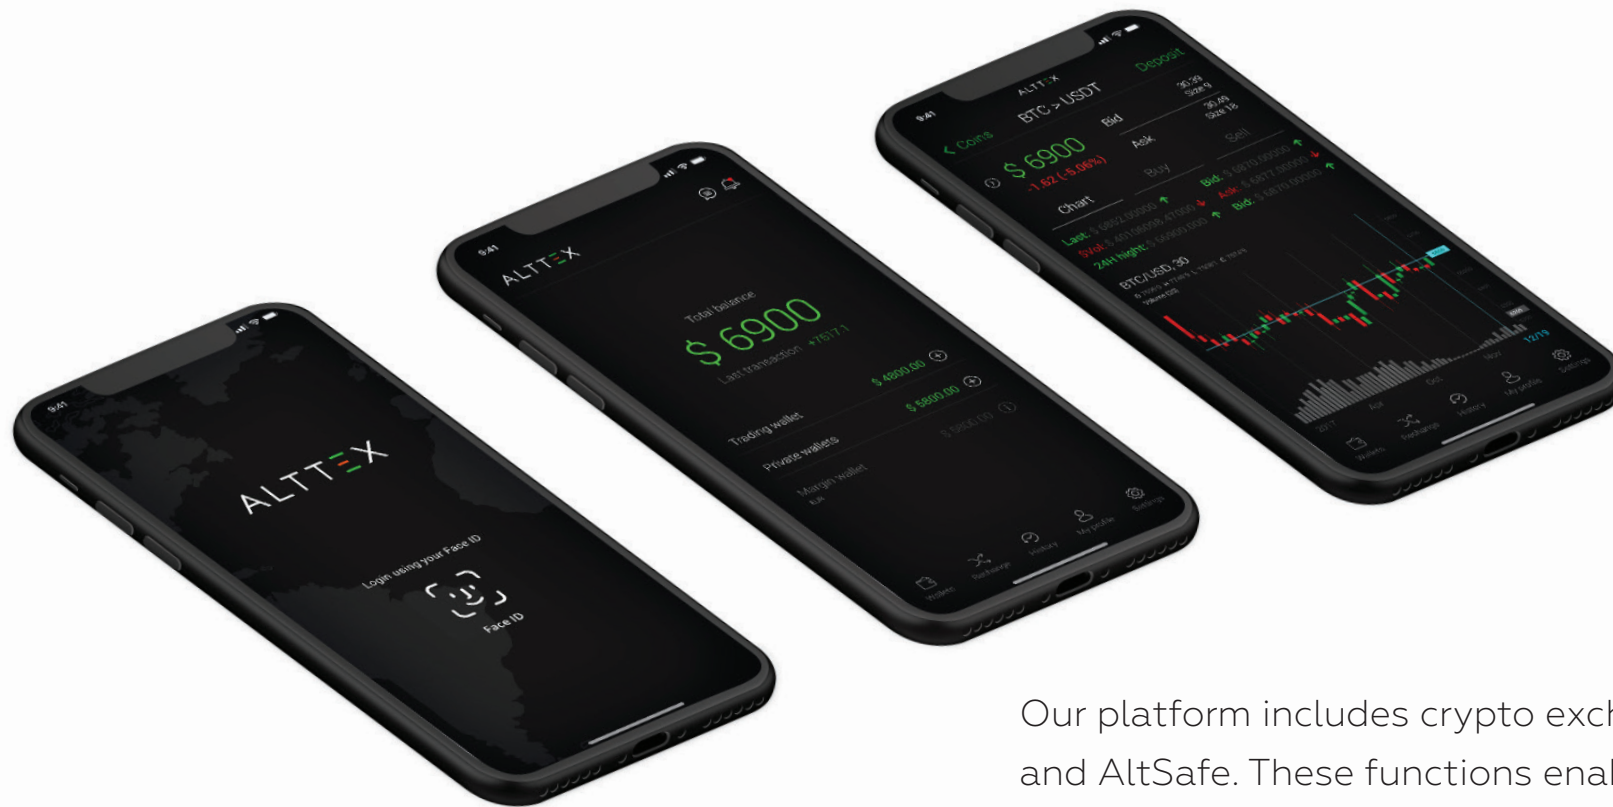

The user will not spend his/her precious time studying the interface and functions as the interface is simple and intuitive clear. Also, applications were designed especially for mobile devices, which makes them universal and can be used anywhere in the world and at the convenience of the user.

**ALTTEX**  
MAKE PERFECT WHAT WAS BEFORE JUST GOOD

**OUR TASK IS TO MAKE THE PLATFORM  
USER-FRIENDLY.**

Our platform includes crypto exchange, crypto messenger and AltSafe. These functions enable users to use different cryptocurrency for payment with minimal commissions efficiently. Our multicurrency wallets is able to hold different cryptocurrency. Users will be able to divide their savings and be updated on their account information. There will also be opportunities to make outgoing calls to any telephone numbers, using AltMessenger.

Users are also able to spend their spare time to indulge in leisure activities through our "Entrainment" segment in our application.

The basis of the Alttex platform lays upon decentralization, which will make the storage and usage of cryptocurrencies safe.

**ALTTEX**  
MAKE PERFECT WHAT WAS BEFORE JUST GOOD

**OUR GOAL IS TO CREATE A UNIQUE  
PLATFORM, WHICH COMBINES ADVANCED  
TECHNOLOGIES BASED ON BLOCKCHAIN  
AND TOOLS FOR ATTRACTING AND  
PRESERVING CRYPTO ASSETS.**

Using our platform, users will have the opportunity to conduct various transactions with cryptocurrencies without intermediaries and having to pay additional commissions.

Thus, implementing the Alttex project, we set the following tasks:

1. Creation of a modern, decentralized **crypto exchange**.
2. Development and creation of a modern **crypto messenger AltMessenger**.
3. The organization and development of **the smart safe AltSafe**, which based on the principles of multicurrency, using the most advanced technologies of protection.

## Advantages of Altsafe, Altmessenger & Crypto Exchange:

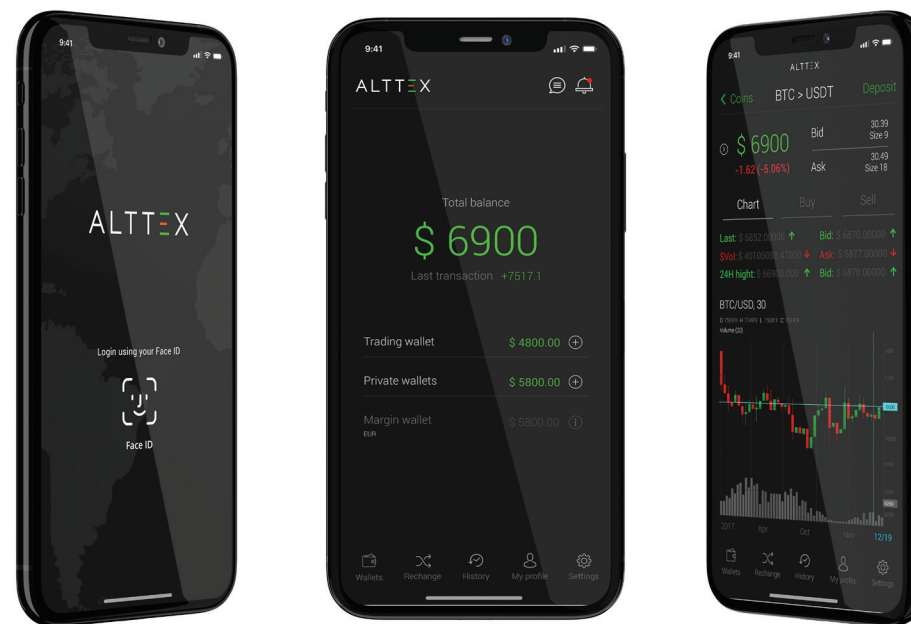

1. **Multifunctional and multitasking;**
2. **Minimize the costs of using digital currencies;**
3. **Compatible** with all kinds of modern mobile devices;
4. Easy to use, **convenient and intuitive interface;**
5. **The best usability of UX applications;**
6. **The speed of transactions;**
7. **An expanded set of functions;**
8. **The most modern levels of protection;**
9. Ability to carry out transactions both **anonymously and after completion of verification;**
10. **The system of automatic learning;**
11. **Professional support service.**

Users who use modern cryptographic exchanges have to face with problems such as: high commission for input / output of money, high commission for creating orders, complicated and long verification, bad UX.

Therefore, our task is to realize all the missing component in the Alttex Consortium applications.

# Platform's structure

## Decentralized crypto exchange Alttext

Users of the cryptocurrency will have to face the need to choose among the many exchanges. The search for exchanges is based on different criteria such as a convenient and intuitive interface, a good choice of currency pairs, the rapid addition of tokens, advanced and thoughtful security settings. Each of the exchanges has its own advantages and disadvantages. Thus, a person may use up to several exchanges, depending on their purpose and transactions.

All crypto exchanges can be divided into two types: centralized and decentralized. A centralized exchange is an exchange where all data and information are stored in one place. The fact that these exchanges, in contrast to large banks, don't have the opportunity to invest a considerable amount of money in improving security, causes such exchanges to often fall under hackers' attacks, fraud from internal employees and price manipulation. Such unauthorized intervention is often successful.

Moving on to the legal dimension. For centralized exchanges, in the cases of fraud, the site's provider takes full responsibility. On a decentralized exchange - directly to the person who engages in illegal activities. Therefore, decentralized exchanges are unattractive for frauds. In cases of detection with transactions that are contrary to the law, law bodies have the right and the opportunity to close a centralized exchange. As for decentralized exchanges, the trade is peer-to-peer. In order to stop such trade, it is necessary to interrupt the actions of a particular person by withdrawing his software.

Some modern decentralized crypto exchanges use the Ox protocol. This protocol appeared in October 2016. The founders are Will Warren and Amir Bandeali. Using the Ox protocol allows you to exchange tokens without centralization. When using Ox protocol, user registration is not required as it is not a software platform, it's a protocol. The central part doesn't have the opportunity to be hacked or regulated by someone higher. Ox is a protocol that makes the creation of decentralized exchanges easier. Ox provides tools and a common structure for people to create reliable decentralized exchanges.

The Alttex currency exchange is decentralized, that's why crypto markers and crypto-currency are not stored in one place, which makes it safer and more reliable. Also, the cryptocurrency decentralized exchange, Alttex, will allow you to conduct purchase and sale transactions without intermediaries and without paying additional commissions.

**A specificity of the decentralized exchange, Alttex, is the ability to add several crypto**

**cards to crypto wallets.** The cards are connected to the wallet, which will allow you to use the cryptocurrency on your account to make purchase in stores and even withdrawing money from the ATM. In addition, you will constantly to be able to be aware of the amount on your account. In case of unsuccessful transactions, refunds will automatically converts into a cryptocurrency at the current exchange rate and returns to the card.

## Crypto exchange, Alttex, has several advantages:

- A it is decentralized, which means that the system is secure and prevents the exchange from being hacked and hacker DDoS-attacks;
- A security system is reliable: all data is secured with Touch ID, Face ID, Pin-code system, which you will receive in your email, with the system of allowed IP addresses and two ranges of authentication;
- A it is designed to trade with mobile devices based on iOS, Android and Windows Mobile.
- A implemented the convenience of trade from a mobile device and the user can control the entire process with easily with a single finger;

A

the fact that each user, in spite of his location, will be able to replenish the balance for the purchase of any cryptocurrency with his credit or debit card is unique;

A

a simple, fast and a secure verification system: for buying cryptocurrency with money from your credit or debit card by connecting your card to the account instantaneously. All you need to do is to take a selfie with a card from both sides through a special technology AltScanner;

A

gives its users the option of selecting several debit crypto cards, (Xapo and others) that are issued which can be easily replenished on the exchange. This will allow you to withdraw money with minimum commission;

A

intermediaries are excluded from the process, the transaction is carried out directly;

A

an alternative use of the 0x protocol, which was developed specifically for decentralized exchanges;

A

there are no additional commissions, for example, for the issuance of a deferred or completed order. The commission for replenishment of balance is lower than the cost of 1 minute of telephone conversation abroad;

A

the data of the user's transactions are not stored in one place which is why no central organization will be able to collect their data;

A

high transaction speed: more than 100 000 transactions per second.

# Platform's structure

## Crypto messenger AltMessenger

With the rapid development of the economy, the advent of many innovative technologies and the development of new spaces, people have the opportunity to move from one place of the planet to another, work without leaving home, plan their business using the Internet. Thus, creating a need to maintain communication between people. Instead of old phones and mail letters that were slowly delivered to the receiver, people began to use instant innovative messengers with a variety of convenient functions, such as chats, channels, groups. People also took the opportunities of using messengers for promotional purposes. People who are thousands of kilometers apart have the opportunity to see each other, hear, express their emotions with emoji , stickers, give

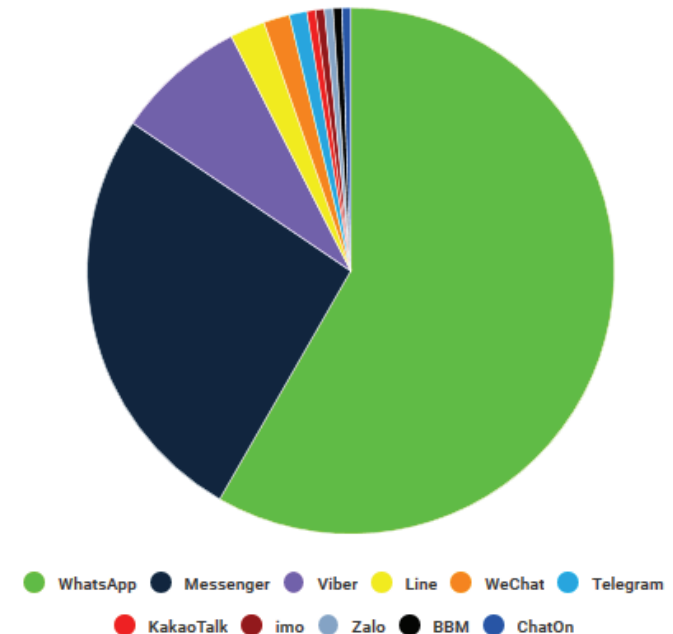

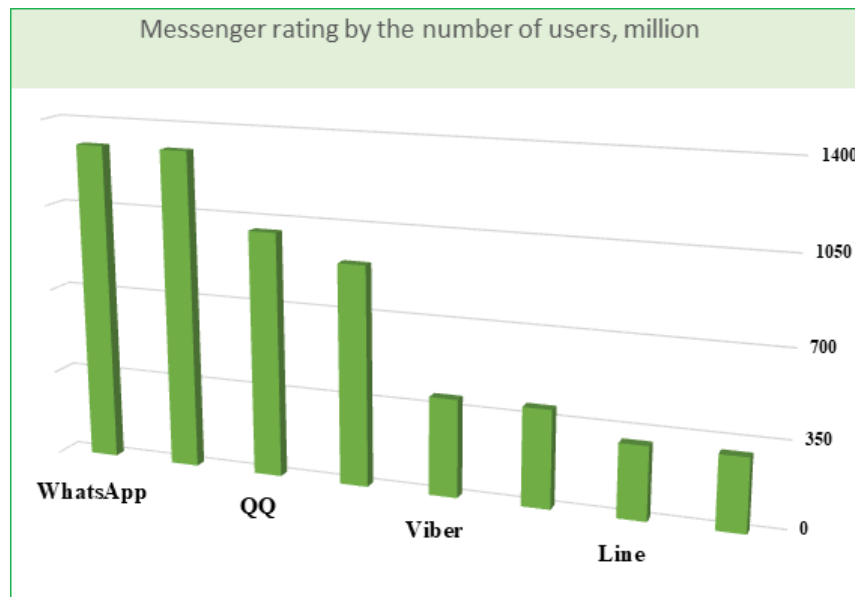

each other virtual gifts, share photos and videos. For work purposes, people can use convenient video conferencing functions which can be displayed on a screen, create working information groups and channels that reduce the time for meetings or briefings and all employees are constantly updated with information. With thanks to messengers, everyone can be informed on new changes within seconds. In some areas of activity, where information changes rapidly and all employees should be notified immediately, this function is indispensable. You can also exchange documents, be informed about if a message has been received, read and if the receiver is on the network. There are additional functions that make life easier for users, such as message forwarding, editing, and so on.

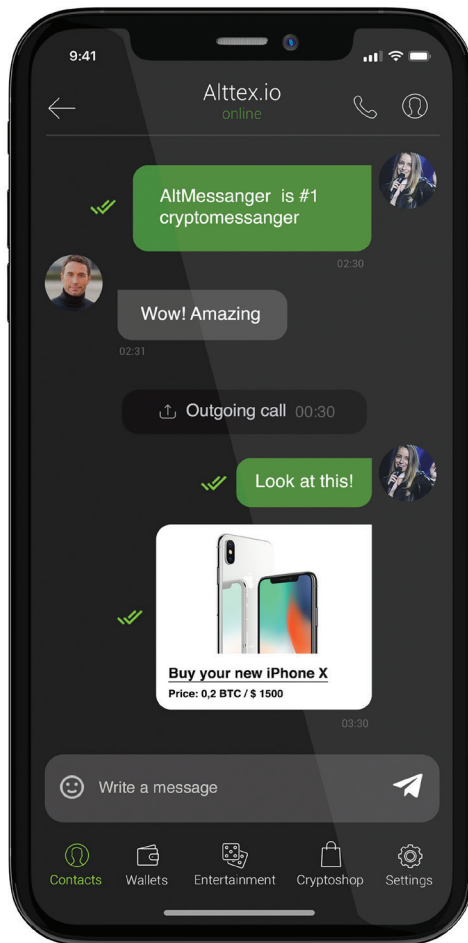

Nowadays, there are many messengers that make a person's life easier and more comfortable. They compete among themselves and at the same time complement each other. Very often, a person uses several instant messengers. These applications have different ratings. Depending on the main criteria of statistics, the ratings change.

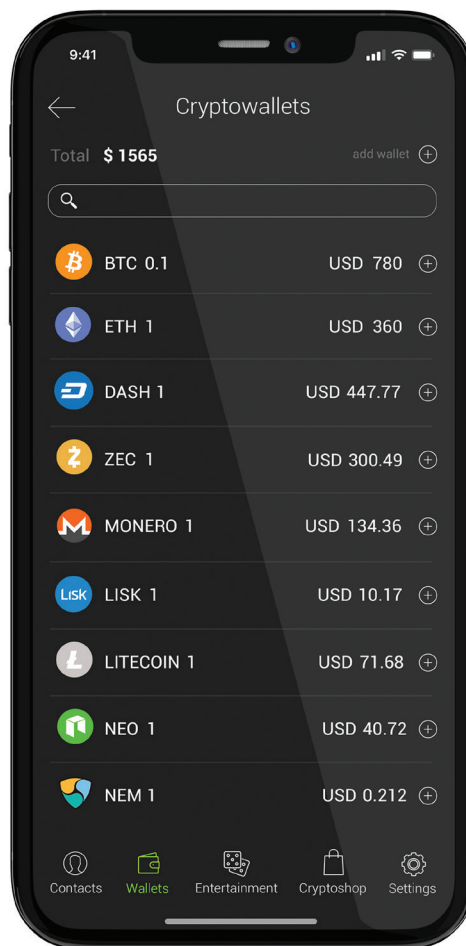

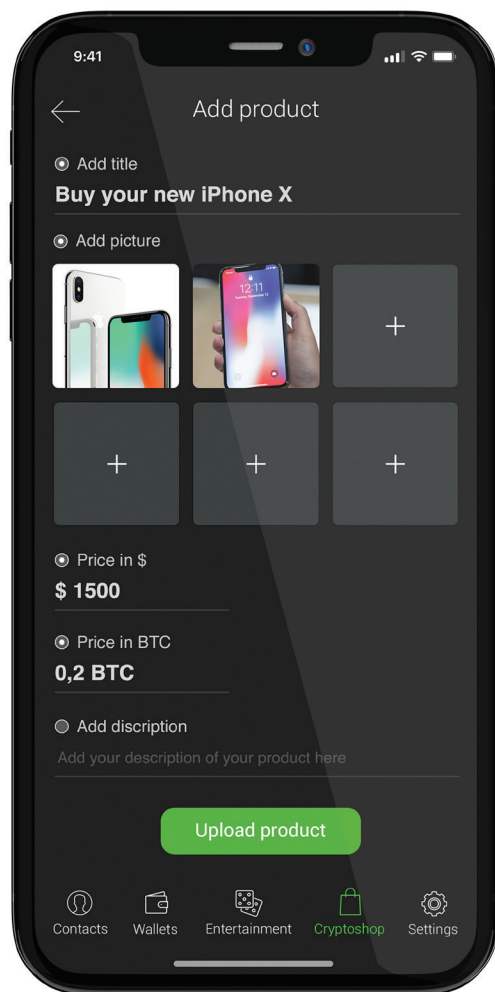

There is the rating by the prevalence of one over another messenger in the world, on how many countries use the messenger and also by which the criteria is the number of people who use the messenger as a means of communication.

## The messenger rating by the number of countries in which it is used

AltMessenger is a decentralized messenger, which works on the technology of block-chain. Thus, it does not have central servers and therefore is completely protected. It performs not only communicative functions but also allows you to purchase goods using crypto wallets, sell items and receive cryptocurrency. The interface of the application is maximally adapted to the user and is absolutely simple and understandable to use, the user will not feel any discomfort using it.

Another indisputable and obvious advantage of this crypto messenger is that it allows you to call anywhere in the world at a much cheaper rate as compared to competitors. The cost of the call is deducted from crypto balance, which was specified by the user. If somebody calls you, you receive AltX cryptocurrency, for which you can buy anything, for example, exchange on the stock exchange for money and send it to your card, buy an application or games, or just use them for calls to anywhere in the world.

# Thus, AltMessenger performs the following functions:

- **Communicative function.** Crypto messenger Alttex allows not only to maintain communication for personal and commercial purposes, but also has many other useful functions. It will be possible to make outgoing calls to different phone numbers, the cost of such conversations will be minimal, within the limits of up to 5 cents per 1 minute of conversation.
- **Multicurrency wallet.** This crypto messenger gives users the opportunity to store different cryptocurrency and exchange it. Multicurrency wallets have intuitive interface.

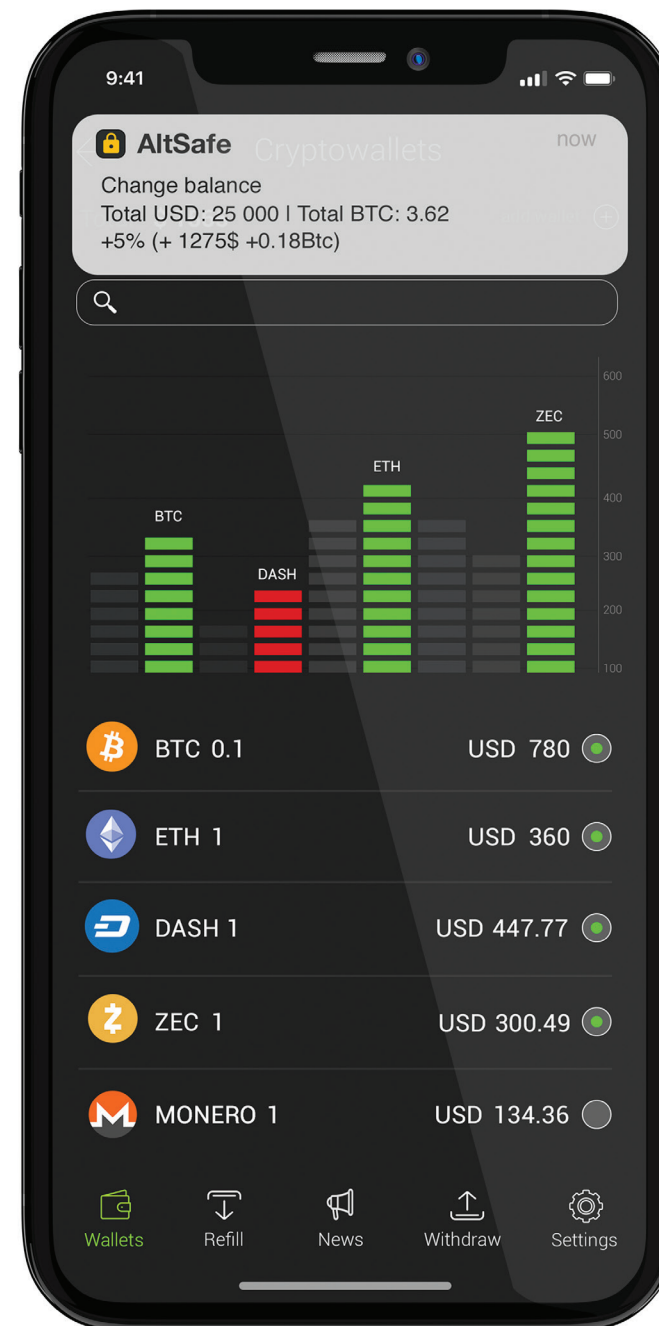

- **Trading platform.** A special tab of the Custom Store will allow you to buy your favorite product and convert currencies. Also, any user will be able to sell their goods. Purchase and sale transactions will be conducted without the participation of intermediaries, directly, without additional commissions. You can also add your product to your catalog or expose the goods for purchase on your wall, with the price in cryptocurrency. When you expose the goods and someone buys it, you receive money on your personal wallet.
- **Entertainment.** Multimedia applications will make your leisure time interesting. There will be genres for all.
- **Chat rooms.** There will be an opportunity to create chats in the messenger.

# Platform's structure

## Smart Safe AltSafe

Wallets for cryptocurrency give the opportunity to have access to money in the blockchain. In such wallets you can store different cryptocurrencies, exchange one currency into another, transfer money, control your balance. Existing crypto wallets have a number of disadvantages, such as the support of only one particular cryptocurrency, which makes the usage of such wallet inconvenient.

There are also another disadvantages such as the bad security procedure, which made big cash losses for many users of different cryptocurrencies this year.

If you take security as a basis, all the wallets for digital money can be divided into 2 types: "cold" (offline wallets) and "hot" (online wallets). The main difference between these wallets is that the "hot" wallets are permanently connected to the Internet, and the "cold" wallets are not connected. They are installed on a separate computer or some other flash drives that are not connected to the network. The storage of currency on online wallets is software, and on offline wallets is hardware. One of the main features that users are interested in is security, because wallets are used for storing of money. "Hot" wallets are often hacked, because many of them have a simplified verification procedure. Risks can also be found in wallets whereby a private key and a confirmation phrase from which is stored on their own servers. "Cold" wallets are the most reliable and secure, because they are not connected to the Internet. Despite its advantage, the "cold" wallets are not as convenient as the "hot" wallets.

JAXX, MyEtherWallet, MuCoWa (Multi Coin Wallet), HolyTransaction and Exodus are popular crypto wallets today. However, they also have their own peculiarities, some of them are designed only for mobile devices, while others are for PC. Some of these wallets are popular because they are safe, others are popular due to their user-friendly interface.

**ALTSAFE INCLUDES ALL THE ADVANTAGES OF THESE WALLETS AND DOESN'T HAVE DISADVANTAGES: IT IS A SMART SAFE, INTERACTIVE MULTI WALLET WITH POPULAR CRYPTOCURRENCY, WHICH HAS A UNIQUE FUNCTION TO SHOW USER REAL-TIME BALANCE ON THE DISPLAY. IT ALLOWS USERS ALWAYS SEE THE GENERAL AMOUNT OF HIS BALANCE WITH PUSH NOTIFICATIONS. THIS IS A "WARM" WALLET, WHICH COMBINES THE ADVANTAGES OF ONLINE AND OFFLINE PURSES AND IT ALLOWS THE USER TO DECIDE HOW MUCH MONEY KEEP ON THE "COLD", AND HOW MUCH ON THE "HOT" PURSE. ALTSAFE ALSO ALLOWS YOU TO STORE DIFFERENT DIGITAL CURRENCIES, AMONG WHICH THERE ARE BITCOIN, ETHEREUM, DASH, ALTX AND OTHERS.**

# The advantages of AltSafe:

A

high degree of safety. This is a "flexible" wallet, which includes the advantages of the "hot" and "cold" purses;

A

the ability to monitor and be aware of your own balance in real time;

A

multicurrency: it allows you to store different cryptocurrency and conduct various transactions with it. You can choose any currency in your wallet and it will be displayed in a simple graph for the current period. You will find out how much you earned during this time period: (day, week, month, year, all the time). Also, you can see the ratio of BTC and USD to your entire balance or selected cryptocurrencies;

A

it is a mobile application for all types of devices, which is also decentralized. All data is in the cloud and can be displayed on the screen of your device;

A

you can add new wallets and easily transfer money to them. Each time, a new wallet will be generated for security purposes;

A

also there will be every news from the cryptocurrency market in the application;

A

after the release of the application, we'll start to create a physical crypto safe (similar to a flash drive (example - TRezor);

A

you can easily transfer money from the exchange to the safe and back (Of course, you can't use those amounts that you put for online deposits till a certain date).

**The main idea of AltSafe** is that it is easy to make money, but it's hard to keep them. We have created a tool with functions which help users to save and increase money. It took only 1 year for the market of cryptocurrencies to grow from 11 billion to 330 billion dollars, and all the cryptocurrencies grew with it. If you saved your cryptocurrencies for only 1 year, you would see profits of 500%, 650%, 1000% today. Therefore, we made the crypto timer function: you will not be able to use the amount of money that you decided until the specified date. So you'll be able to realize your goals and make your dreams come true.

# Features and benefits of the platform

**Blockchain technology.** First, let's get acquainted with the technology of Blockchain. What does this technology represent? Blockchain is a kind of aggregate of certain records that are included in blocks. These blocks are connected with each other by means of cryptographic verification. Blockchain is a digital safe that stores the truth, which is agreed with all network members. These records are stored in different places. The registry they create is absolutely decentralized. The software, which uses blocking technology, based on open source code, is called DApps and does not have distinctive features that can be characterized by it. This is decentralized (the register of records is stored in a decentralized detachment), openness (changes should be made by the voice of the majority of users or by reaching a compromise), encouragement and stimulation (blockade validators need to be rewarded by giving them crypto currency), PoW (Proof of work), PoS (Proof of Stake), which demonstrates the proof of value.

Decentralized technology blocking allows you to make transactions on the stock exchange instant. The decentralized network operates on the principle of P2P, "from user-to-user". Due to the fact that the information is not stored centrally, there are no vulnerability points that attract hackers. To increase the level of security, personal and public keys are used, which is encryption.

**Decentralization.** The basis for the Alttx platform is a decentralized network where each user is part of Alttx's blockchain. The full responsibility for carrying out the transaction is assigned to the Alttx network block, while all reporting on the transactions is stored in encrypted user, same as bitcoin. To increase the transaction speed, the Alttx token uses the DPoS consensus algorithm. This means that participants transfer responsibility for verifying a particular transaction to selected delegates (nodes with the largest capital). This is the basis of the maximum transaction speed. The voice that the candidate receives in order to become a miner is very flexible: it is easily assigned for fulfilling the requirements and can also be easily taken away in case of an error. Miners receive a financial reward for processing the transaction, so they are interested in making sure that reasonable transactions are included in the blocks.

In the opposite cases, users can withdraw their votes and the miner will drop out of the list of block producers. Thus, for elected delegates, there is no need to wait for the verification of all nodes of the network if the block to which the transaction fits comes from a trusted delegate. This scheme gives a number of unshakable advantages: improbable speed development and excellent controllability. DPOS network as of the current time has never been hacked.

## Transaction speed

One of the main shortcomings of modern projects with Blockchain technology is the low transaction speed. Below is the statistics on the number of transactions:

The use of blockchain technology allows Alttext to solve this problem.

- 
- **Bitcoin:** this is 3-4 operations/second.
  - **Ethereum:** this is 30-40 operations/second.
  - **Waves:** this is 1000 operations/second.

**Below are examples of the need for a certain speed of operations in our time:**

- **Visa:** 60,000 transactions/second.
- **Facebook:** 50,000 likes/second.
- **Instagram:** 40,000 likes/second.

Alttext is a decentralized blockchain platform that allows you to abandon an intermediary in the execution of transactions. For example: You are going to fly on a trip abroad which require you to contact the tour operator and complete all the necessary documents. You incur additional expenses for organizing your trip. Of course, you can do everything yourself in this case, refusing an intermediary, and the process of preparing for a trip will be longer and more torturous. In the case of the Alttext decentralized platform, the withdrawal from the intermediary process is absolutely painless and palpable in the form of saved time and money.

## Cloud computing

What are the advantages of using cloud computing? The point is that the purpose of cloud computing is to collect and merge data, for example, various applications and services. These combined data integrate with modern networks and allow us to provide a truly secure service: processing power, memory and certain services.

We live in an information society where a lot of information passes through us every day. The one who owns the information and is able to properly dispose of it, owns everything. Political news broadcasts to us every minute on television, magazines and newspapers are intrigued by loud headlines, advertising posters invite somewhere, call for something. Everyone tries to take over most of the audience and continuously expand it.

According to the principle of the cloud model, every minute a huge amount of data and information is delivered to users of various devices. The problem with the cloud model is that the cloud physically has one or more locations. In order to solve this problem and make the cloud model effective from the point of view of the requirements of modern society, it is necessary to realize the opportunity to deliver information to users using a geographically divided platform. Cloud computing solves this problem.

**THEIR MAIN IDEA IS TO DISTRIBUTE DATA AND INFORMATION, INCREASE SECURITY, MINIMIZE AND ELIMINATE OBSTACLES AND DELAYS THAT ARE ASSOCIATED WITH DATA TRANSMISSION. DATA RETENTION AND SECURITY MAKE COMMUNICATION EASY AND UNIFYING. CLOUD MODEL ALLOWS USERS TO COMMUNICATE WITHOUT ANY LOSS OF DATA FROM ANY DEVICE AND ANY CORNER, WHILE HAVING A HIGH DEGREE OF DATA PROTECTION.**

Decentralization and dispersal of the network and data under the cloud model significantly expands the opportunities for the development of cloud technologies. Data, regardless of volume, can be quickly and efficiently analyzed. In particular, cloud computing allows you to do this in real time.

The Alttex platform has the functionality to support any service task, since it does not have a single authority that controls the allocation of computing resources. The project also supports any computational task, thanks to its hybrid architecture and decentralization.

**THE PLATFORM, BUILT ON BLOCKCHAIN TECHNOLOGY, HAS OPEN SOURCE CODE, AND THIS OPENS UP A UNIQUE OPPORTUNITY FOR USERS TO EXCHANGE INFORMATION WITHOUT THE PARTICIPATION OF THE PROVIDER'S SERVER. THIS INCREASES THE SECURITY OF INFORMATION, AND THE USE OF CLOUD COMPUTING ALLOWS YOU TO MAKE MOST OF THE FUNCTIONS FREE.**

# Value of AltX tokens

For the project participants, as well as for investors, tokens are a digital asset. Advanced token functionality is an additional motivation to stock up such assets as long as the project is at the launch stage, and after the project starts working, use them and put them into circulation. AltX will be offered on the Ethereum blockchain platform

The role of the AltX token will be used for calculation within the system when performing a buy-sell operation, that is, it acts as an internal means for calculation with which you can expand the application functionality package, buy stickers, sell or buy goods, and exchange it for other popular cryptocurrencies.

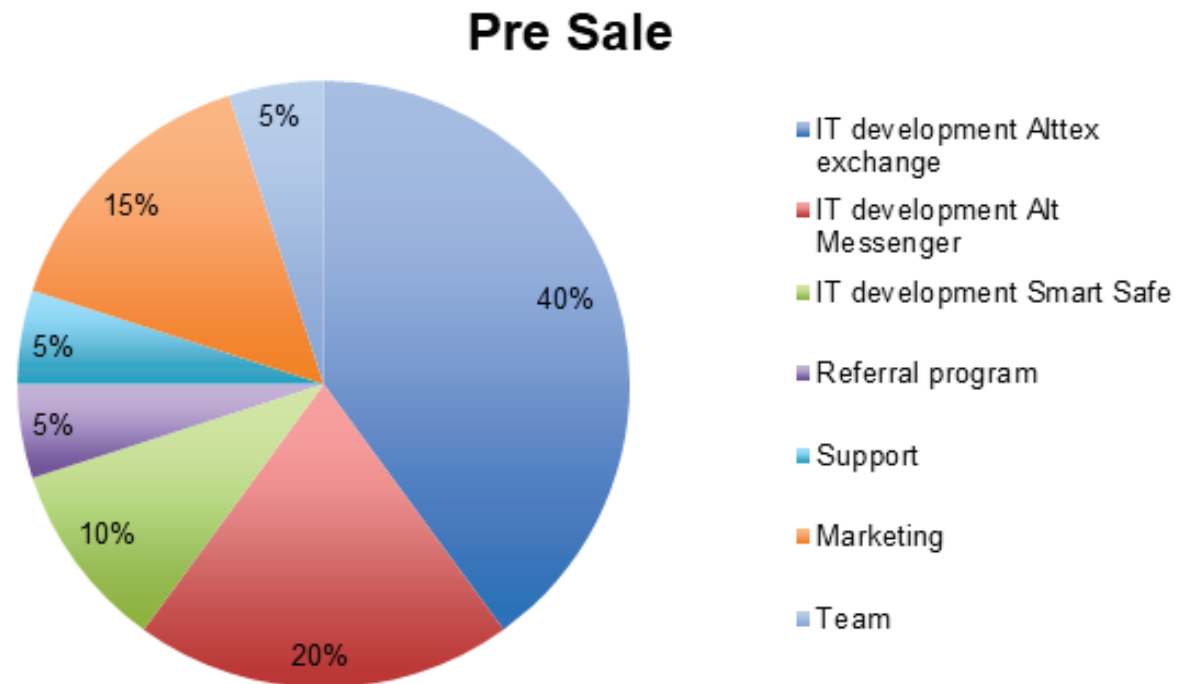

Also, AltX tokens will be accepted as payment for placing advertisements in our applications, and will open a number of other possibilities.

**THE NUMBER OF ALT X TOKENS RELEASED WILL BE 50,000,000.  
HARD CAP PROJECT \$ 20,000,000. MINIMUM TO START ON THE PRE SALE, WE  
PLAN TO COLLECT \$ 200,000.**

Maximum to start on the Pre Sale, we plan to collect \$ 500,000.

This is the minimum required initial amount that will allow us to make the first version of 3 finished products, which we will be able to present to the general public 4 months after the fundraising, and in parallel to hold a full ICO to attract the principal amount that is necessary for the full functioning, development , promotion and support of our services.

Pre Sale will take place in 2 stages, which will provide the investor with the following advantages:

**I STAGE  
PRICE ALTX – 0,5\$ :**

1. It will be possible to trade without commission for the execution of orders.
2. Depending on the amount of investment will receive up to 10% of the income of our stock exchange, which will be paid at certain intervals to personal purses inside the exchange, in proportion to the contribution:
  - a) 100 - 1000 \$ - 2% per year;
  - b) 1001 - 3000 \$ - 3% per year;
  - c) 3001 - 5000 \$ - 5% per year;
  - d) 5001 - 10,000 \$ - 7% per year;
  - e) 10001 - 50000 \$ 10% per year.
3. Bonus + 50% to the number of purchased ALTX.
4. Referral program + 5% ALTX.

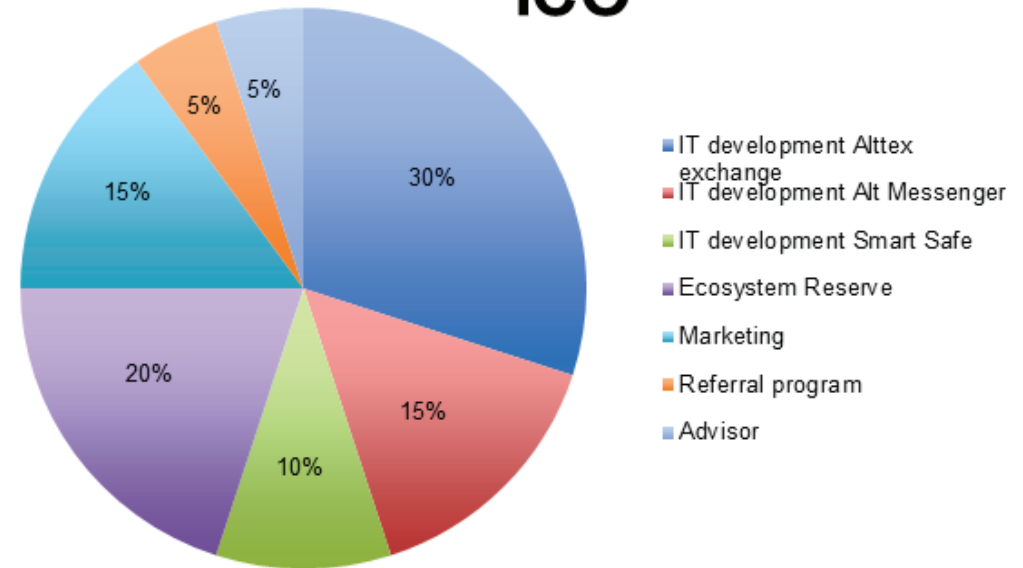

## II STAGE PRICE ALTX – 0,5\$:

1. It will be possible to trade without commission for the execution of orders.
2. Depending on the amount of investment will receive up to 8% of the income of our stock exchange, which will be paid at certain intervals to personal purses inside the exchange, in proportion to the contribution:
  - a) 100 - 1000 \$ - 1% per year;
  - b) 1001 - 3000 \$ - 2% per year;
  - c) 3001 - 5000 \$ - 4% per year;
  - d) 5001 - 10,000 \$ - 6% per year;
  - e) 10001 - 50000 \$ - 8% per year.
3. Bonus + 40% to the number of purchased ALTX.
4. Referral program + 5% ALTX.

## ICO

The ICO itself will also be held in 2 stages with the subsequent increase in the price of ALTX, which will provide the investor with the following advantages:

These calculations are presented in the table below

DATE	ROUND	PRICE,\$	ALTX	BONUS, %	TOTAL ALTX	PART,\$	FOUND,\$
25.12.17	Privat PRESALE 1	0,5	500000	50	725000	250000	500 000
21.01.18	Public PRESALE 2	0,5	200000	40	280000	100000	
	TOTAL		1000000		1410000	500000	
03.03.18	ICO ROUND 1 Waitlist	0,7	5833333	20	6999999	3500000	
19.03.18	ICO ROUND 2 Waitlist	1	16000000	10	17600000	1600000	19500000
	TOTAL		21833333		24599999	19500000	

### **I STAGE PRICE ALTX – 0,7\$:**

1. It will be possible to trade without commission for the execution of orders.
2. Bonus + 15% to the number of purchased ALTX.
3. Referral program + 5% ALTX.

### **II STAGE PRICE ALTX – 1\$:**

1. It will be possible to trade without commission for the execution of orders.
2. Bonus + 5% to the number of purchased ALTX.
3. Referral program + 5% ALTX.

# Example of a return on investment of \$1000 on Pre sale:

$1000 / 0.50 = 2000 \text{ ALTX} + 50\% (1000 \text{ ALTX}) = 3000 \text{ ALTX}$

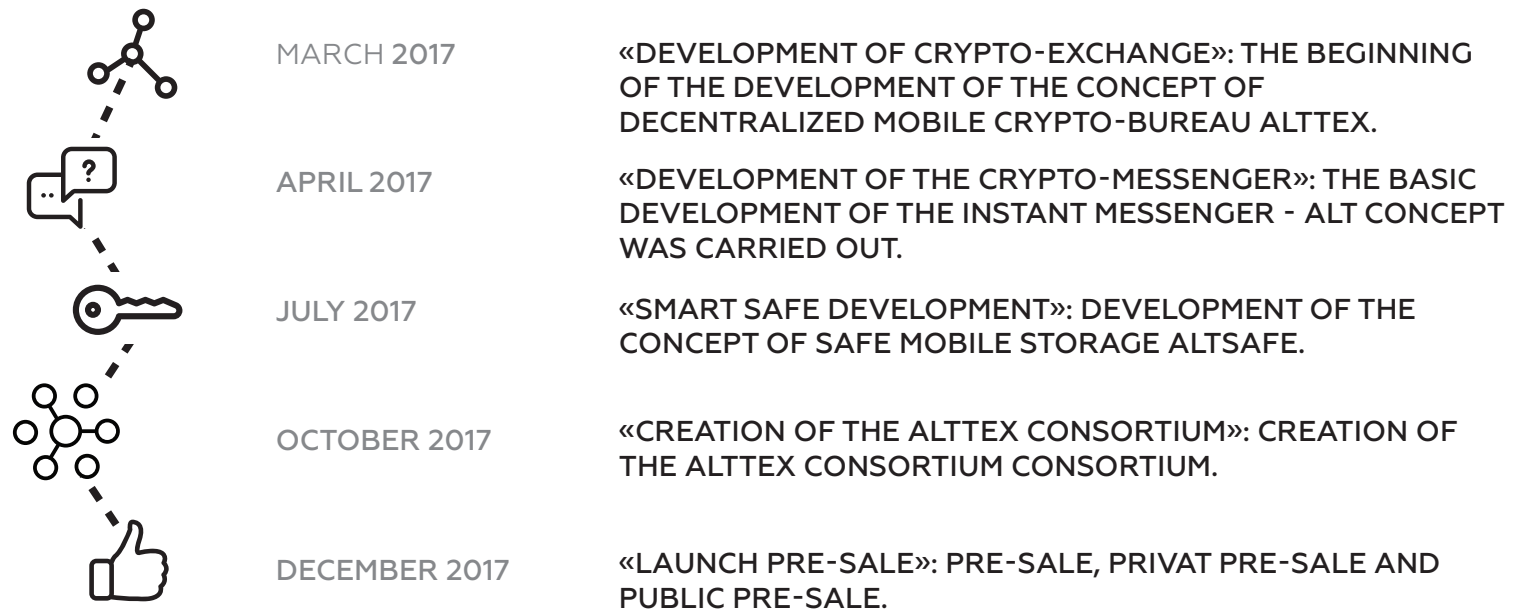

Total in six months you get  $3000 * 1 \$ = \$ 3000$ , and also have 3% of the profit from the income of the exchange.

For example, the income of the Bittrex exchange is about \$ 1,600,000 per day, Exmo - \$ 94,000 per day, Livecoin - \$ 58,000 per day.

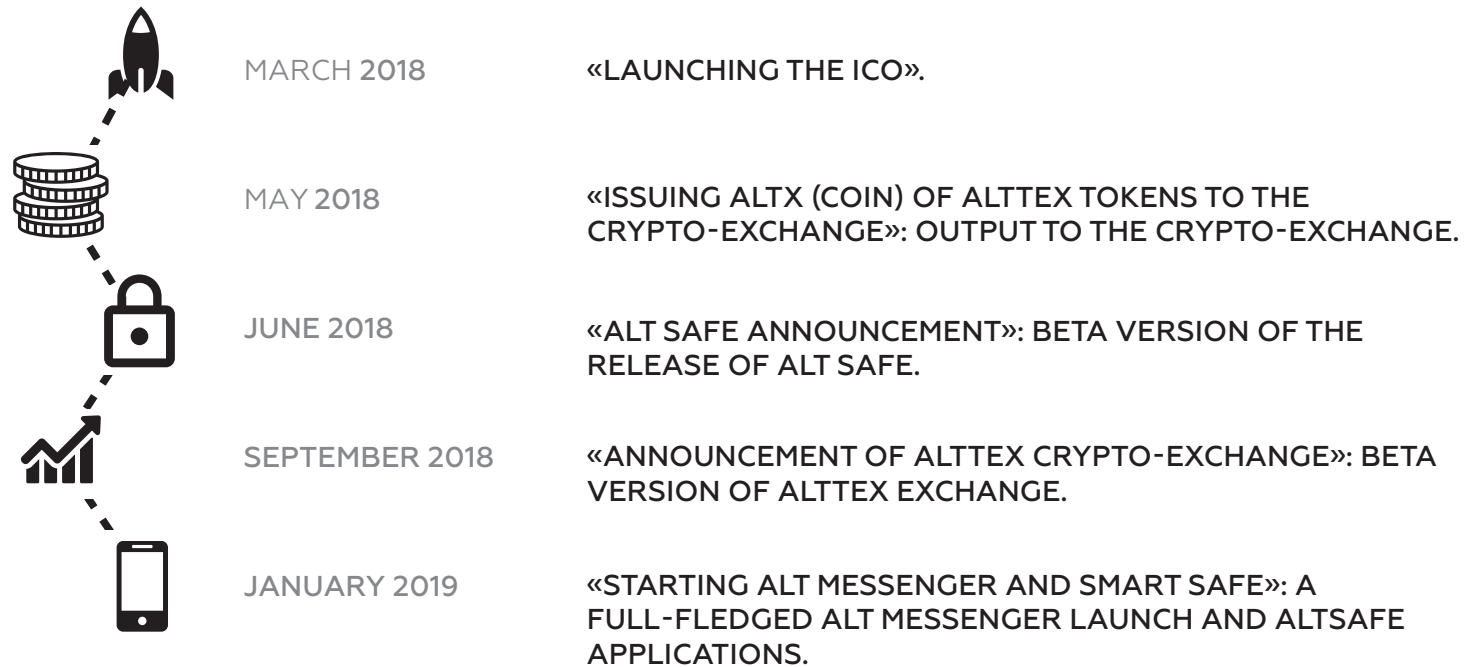

## Referral program

A one-level referral program that provides a 5% bonus on the amount invested by an investor. This increases profitability for investors by increasing the number of coins and have a good profit by the moment it enters the exchange.
