ATMT

THE WORLD'S FIRST
ATM TOKENS MACHINE

INTRODUCTION:

Most crypto currency exchanges such as bittrex, bitfinex, bithumb, coinbase, gdax and kraken provide professional investment tools and high liquidity for investors, creating an efficient and secure environment. But such exchanges require users to undergo complicated processes of verification and account approval.

Furthermore for users, purchasing small amounts of Ethereum is not practical or efficient through exchanges. this is the main issue which keeps the general public from adopting crypto currencies. Ordinary consumers and beginner users can instead utilize Ethereum ATMs which simplify the entire process.

Worldwide, bitcoin atms have been quite popular because of their ease of use and less-invasive processes. we want to bring the most popular blockchain platform, at a better price, and a better process. as global adoption of Ethereum increases due to rising development activity, Ethereum ATMs will be useful channels for casual users and investors.

Through the two-way ATMT, Ethereum users and investors can easily purchase Ethereum for fiat. Similar to how bitcoin ATMs work, Ethereum atms display an ether deposit address for sellers and require buyers to enter the addresses of their Ethereum wallet to purchase the cryptocurrency with their local currency.

ETHEREUM ATM MARKET:

The amount of cryptocurrency in the markets today currently exceeds $400 billion in value. While crypto ATMs offer the simplest and most direct portal for consumers who want to instantly buy cryptocurrencies, there are less than 1,600 crypto ATMs deployed worldwide today. Based on these figures and given the need for geographic accessibility, ATMTOKEN INC. believes that there is considerable potential for the increased ability to use Ethereum ATMs across the globe. Furthermore, when compared to the over 3 Million traditional ATMs currently deployed worldwide, ATM TOKEN INC. sees the appetite for usefulness of the new technology embedded in the newly invented ATM for crypto ATMs as significant and timely. According to information from owners who installed a bitcoin ATM, it can increase sales up to 10-30% because of new customers, who come to use the bitcoin atm.

Our visions are to have one ATMT machine in each major city in Europe, at a rate of 10 machines in each country. **Ideal locations:**

- Restaurant/Pizzeria
- Cafe/Coffee shop
- Shopping malls
- Supermarket / Food store.

ATMTOKEN PROJECT:

ATMTOKEN INC. believes the widespread international growth of crypto ATMs is a significant step towards providing a portal between government-issued fiat currencies and cryptocurrencies, enabling global access to innovation within the financial sector. In synch with this goal, we are launching a new crypto-asset, "ATMTOKEN" (symbol: ATMT), Which will be the core of all transactions in the NEW Ethereum tokens ATM machine, including a dividend system from all machines transaction fees back to token holder's wallet as ETH rewards.

TECHNICAL DESIGN: SIMPLE & SECURE:

ATMToken is an Ethereum token following the ERC20 protocol. We will take a conservative design approach in order to minimize the attack surface that complicated smart contracts present to hackers around the world. Furthermore, we chose not to use an advanced contract token architecture to minimize the number of ways the token and token-holders can be attacked. Our token contract is available to view here:

https://etherscan.io/token/0x331A550a2C7f96384eb69127AA0eA9AD4b5Da099

ATMT MACHINE:

Getting Ethereum / ATMT has never been easier, Three simple steps

1 Scan your QR code   **2** Insert cash   **3** Send Tokens

We are planning to use Lamassu ATM Machine, which is one of the best crypto ATMs with an open source and fully customizable software.

Here are some of its **features:**

1   6mm hardened Swedish steel vault, 2.5mm steel enclosure

2   Advanced open source admin backend enables full remote control of machine

3   Top of the line anti counterfeit bill validation

4   Decentralized operation ensures no single point of failure

5   Holds up to 600 bank notes and accepts currencies in nearly 200 countries

6   Independence: Operation with or without third-party services

WHAT'S HAPPENING INSIDE THE MACHINE?

Implementing ATMT token as a gateway between (Ethereum & Other tokens) in the ATM unit and customers buying order

Customers will be able to buy (ETH, ATMT, and Many other tokens to be added to the software).

Having ATMT converting assets will only increase its value/trading volume as its showing below

Options #1 Buying ETH

ATM USDT	ATMT	ETH	+7% Fee	Customer's Wallet

Options #2 Buying ATMT

| ATM USDT	ATMT	+3% Fee	Customer's Wallet

Exchange Pairs are
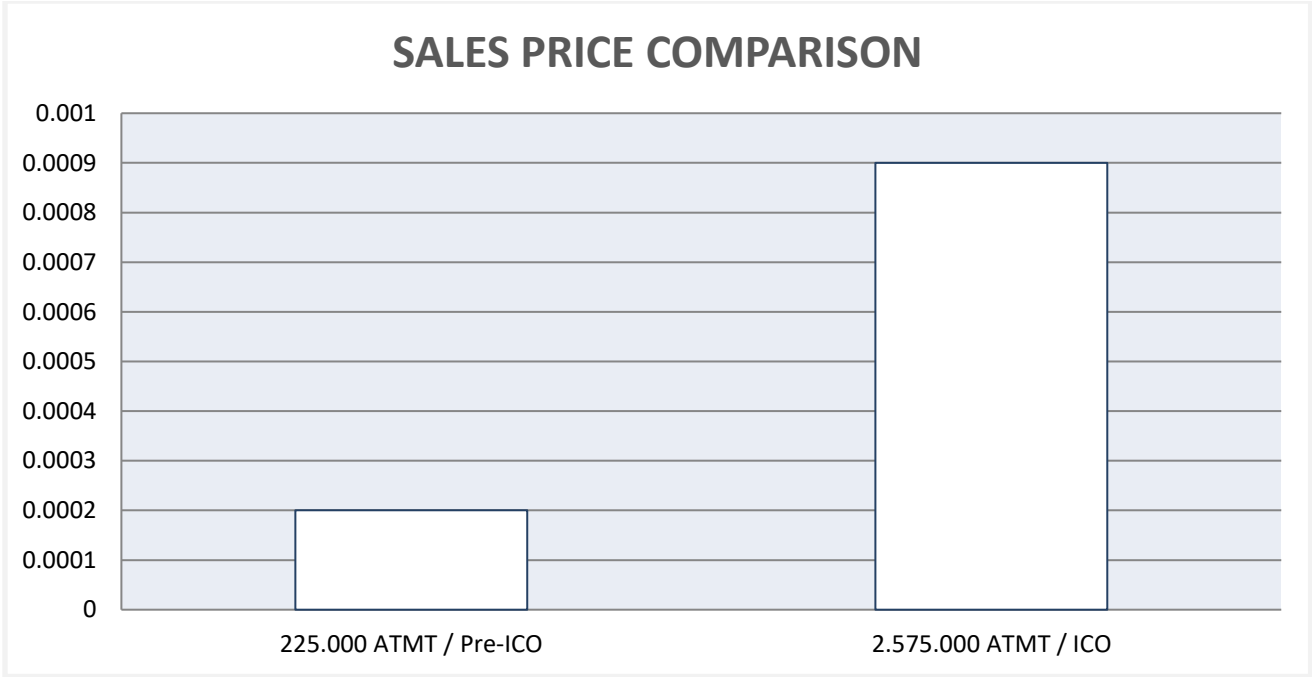

ATMT - USDT

ATMT - ETH

ATMT - BTC

ATMT machine can be controlled online in the main server where it's possible to monitor all transactions, balance, the main wallet in the exchange website, and it's only required to have a cash collector employee

The cash withdraw will be sent back to the main bank account in order to distribute it accordingly.

- **50% investors**
- **50% development team** (location rent, support and development, future plans)

ICO (INITIAL COIN OFFERING) DETAILS:

The cost of one ATM machine is around 7.000 USD, ATMT startup plan is to install 200 machines in Europe buy q2 2018 and another 200 by q4 2018. And that will require us to have at least 2.800.000$ for the project's full potential however, since the first target is 200 ATM unites we believe we can manage to complete the first and hit the second target by investment return funds.

SALES PRICE COMPARISON

	225.000 ATMT / Pre-ICO	2.575.000 ATMT / ICO
Price	0.0002	0.0009

Pre-ICO Info:

- Pre-ICO minimum cap is 45 ETH
- Pre-ICO Price is 0.0002 ETH for 1 ATM

- 1 ETH = 5000 ATMT
- 225.000 ATMT for Pre-ICO sale

The purpose of Pre-ICO is to get enough funds for ATMT project's prototype launch and that includes ATM price + software development + project online promotions.

The price of the Pre-ICO is the best opportunity for investors to get involved in the project before the prototype go live with ICO promotions and get out to crypto traders/investors. All details about ATMT sales distribution are mentioned down below.

ICO Info:

- ICO hard cap is 2400 ETH
- ICO will start after ATMT prototype machine is developed and promoted.
- ICO Price is ±0.0009 ETH for 1 ATMT
- 1 ETH = ±1100 ATMT
- Total tokens left for ICO sale is 2.575.000 ATMT

ATM Token Sales Distribution:

100.000 ATMT Airdrop/Bounty/Community promotions, all promotions are finished and tokens had been distributed

225.000 ATMT Pre-ICO - 45 ETH

2.575.000 ATMT ICO - 2407 ETH

100.000 ATMT Reserved for project expanding

Maximum supply of ATMToken is:

3.000.000 ATMT

3M ATMTokens Distribution

DIVIDEND SYSTEM:

If 400 machines had an average transaction size of 100 USD daily

400 machines x 100 USD = 40.000 USD

40.000 USD x ~7% fees = 2.800 USD
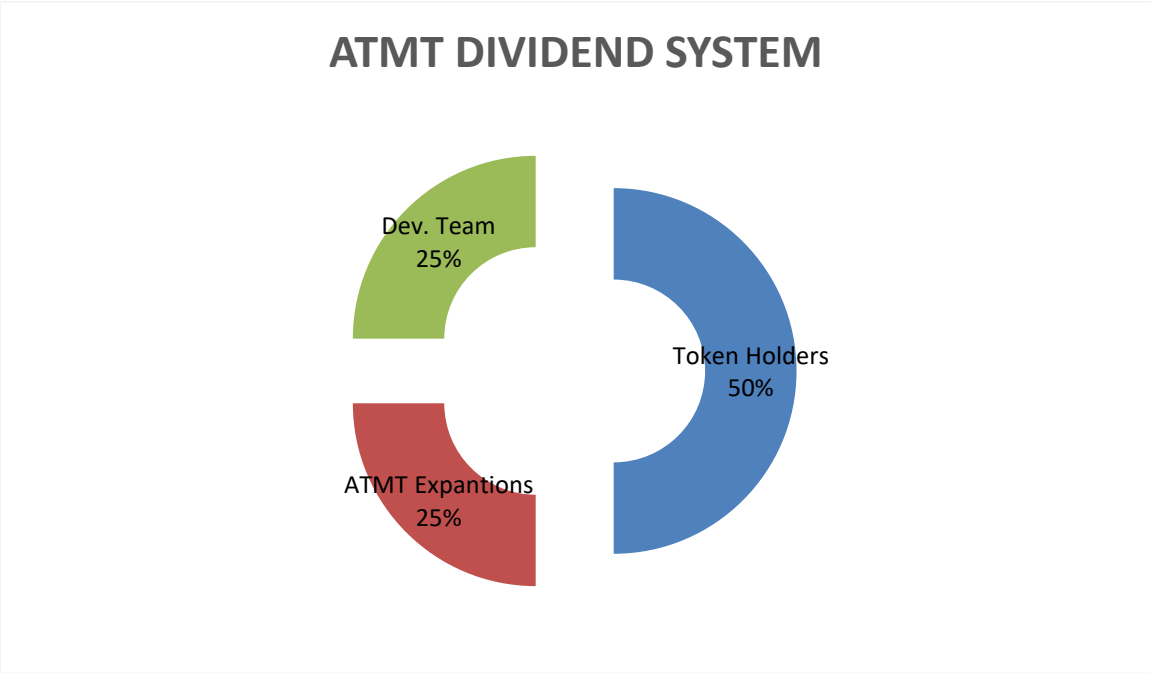

2.800 USD / 2 (investors / dev. team) = 1400 USD for our investors

1.400 USD / 3.000.000 (ATMT max supply) = 0.000466 USD dividend for each token

(Now, if you have 5000 ATMT token)

0.000466 USD x 5000 ATMT= 2.33 USD daily, 16.33 USD weekly!

Payment directly to your ETH wallet via token based fee split distribution.

ADDITIONAL RESOURCES:

Keene's bitcoin atm, us (first skyhook, then lamassu) this bitcoin atm is located in keene at route 101 gift shop. Initially there was a small skyhook installed in july 2014 and then in april 2015 it was replaced with a lamassu bitcoin atm. it has been in operation for more than a year. some stats are available, while according to this article the owner is using the same bitcoin address for payouts to customers.

After finding the corresponding volume of sold bitcoins in usd the following chart was created:

Row Labels	Sum of USD equivalent
01-07-14	27.54
01-08-14	240.83
01-09-14	510.24
01-10-14	2,025.51
01-11-14	2,927.25
01-01-15	233.70
01-04-15	1,011.30
01-05-15	2,500.86
01-06-15	2,415.97
01-07-15	5,852.93
01-08-15	30,184.69
01-09-15	20,084.81
01-10-15	27,440.69
01-11-15	4,036.35

Total

Month

During the period of july 2014 – july 2015 the machine was generating about $2-3k monthly volume, but since august 2015 the volume jumped to about $20-30k per month and stays at this level.

Keene is a small city in New Hampshire with about 23k population. so from where all this volume came? according to the owner: "our customers range from young to old from all across the northeast, because sadly, the keene bvm is the only publicly accessible bvm (or atm) in all of me, nh, vt, ma, ct, ri, and upstate ny. new york, the empire state, has cracked down on the bitcoin industry there, resulting albany and buffalo losing their machines in 2015". so it looks like bitlicense played a good role here and people started visiting the machine from remote areas.

Speaking about profitability, the first year was quite hard with respect to roi, as during the first 12 months the machine brought about $17.7k of volume only (looks like in jan-mar 2015 the machine was not working as there were no transactions). With 5-10% operator charges it could bring $1700 earnings during the whole year maximum, which could be assessed as a failure. but then after the growth of volume, the machine now probably generates $2-3k per month in profits, which results in about a 3 month roi. at the moment of writing this article, it was 12th november, so last month's stats is not yet full, hence why graph is decreasing.

WHO WE ARE AND WHAT IS ATMT COMPANY:

ATMT Inc. is a registered company under Sweden beneficial ownership. We are a team of Business relations, marketing and a blockchain developer based in Sweden.
You can find more about our company in [Linkedin](#)

L. Oskar
Founder of ATMT.
Leo is the founder of ATMT, Graduate from Stockholm University 2008 Bachelor in project management. Long experience in sales and accounting management, former operator of 3 Bitcoin ATMs in Sweden and UK.

Berg Henriksson

Financial Advisor

Henriksson, the finance expert in our firm, he is accounting professional with 6 years experience in financial investment. Marketing analyst and IT auditing.

Wisdom Oparaocha

Software Engineer

Wisdom is our smart contract developer, and the lead software engineer for microdapp.com He is ready to build and we are thrilled to have him apart of the team!

Stefan Åberg

Linux Kernel Developer

Elliot is very ambitious Linux developer he has a wide variety of experience in the kernel. He will provide long term maintenance services and support to our ATM software.
